

Exchange Design,
Migration or Upgrades

Exchange Design, Migration or Upgrades

Making the decision to either implement or upgrade your primary messaging system is a serious decision requiring proper planning and architectural design. Unlike the "Sunday Afternoon Job," that minor home improvement project that you decide you can polish off quickly, businesses must carefully consider and plan the implementation of Exchange 2000 and 2003.

Exchange 2000/2003 is a sweeping architectural revision to the Exchange product line with new capabilities in the areas of server capacity, reliability, scalability, connectivity, administration, and monitoring all having considerable effect on the implementation of this technology within organizations. In addition to the obvious changes that Exchange 2000/2003 will facilitate, many organizations will find that the features of this product enable a review of the way they implement messaging services.

Service Covers:

- Design upgrades and/or migrations
- Architecture of new installations
- Web Enabled Outlook
- Support and Maintenance
- Disaster Recovery

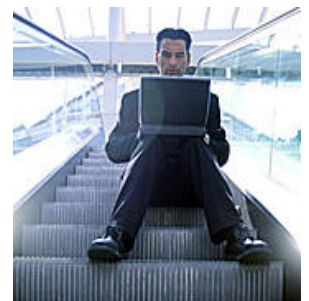

Since 2000 IT Solutions has been a leading technology services company. With deep industry expertise and proven experience in consulting and outsourcing, IT Solutions can mobilize the right people, skills alliances and technologies for your Exchange Design Migration & Upgrades.
